RE8040 -BLR

AGUA CONTROL LLC 5609 E ADAMO DRIVE STE.D TAMPA FL, 33619 (813) 621-7774 (813) 621-7776

Low pressure grade RO element for brackish water

SPECIFICATIONS

General Features Permeate flow rate:

9,000 GPD (34.0 m³/day)

Nominal salt rejection:

99.6%

Effective membrane area:

400 ft² (37.2 m²)

1. The stated product performance is based on data taken after 30 minutes of operationat the following test conditions:

• 1,500 mg/L NaCl solution at

150 psig (1.0 MPa) applied pressure

- 15% recovery
- 77 °F (25 °C)
- pH 6.5 -7.0
- 2. Minimum salt rejection is 995%.
- 3. Permeate flow rate for each element may vary but will be no more than 15%.
- 4. All elements are vacuum sealed in a polyethylene bag containing 1.0% SBS (sodium bisulfite) solution and individually packaged in a cardboard box.

Membrane type:

Thin-Film Composite

Membrane material:

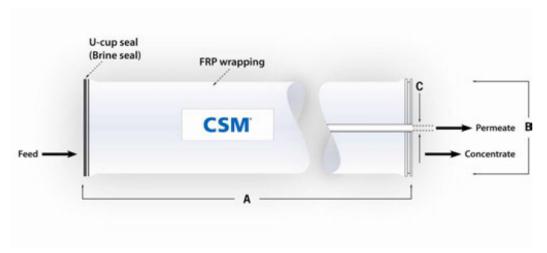

Polyamide(PA)

Element configuration:

Spiral-Wound, FRP W rapping

Dimensions and weight

Model Name	A	В	С	Weight	Part Number	
					Inter - connector	Brine Seal
RE 8040 -B LR	40.0 inch (1,016 mm)	8.0 inch (201 mm)	1.12 inch (28 mm)	15 kg	40000308	40000309

- 1. Each membrane element upplied with one brine seal, one interconnector (coupler) and four o-rings.
- 2. All RE8040 elementsfit nominal 8.0 inch (201 mm) I.D. pressure vessels.

Design Guidelines for Various Water Sources	 Wastewater Conventional (SDI < 5) Wastewater Pretreated by UF/MF (SDI < 3) Seawater, O pen Intake (SDI < 5) Seawater, Beach Well (SDI < 3) SurfaceWater (SDI < 5) SurfaceWater (SDI < 3) Well water (SDI < 3) RO permeate (SDI < 1) 	8–12 gfd 10–14 gfd 7–10 gfd 8–12 gfd 12–16 gfd 13–17 gfd 13–17 gfd 21–30 gfd
Satur ation Limits (Using Antiscalants) †	 Langlier Saturation Index(LSI) Stiff and Davis Saturation Index(SDSI) CaSO 4 SrSO 4 BaSO4 SiO 2 [†]The above saturation limits are typically accepted by manufacturers. It is the user's responsibility to ensur concentration are dosed ahead of the membrane system or damaged due to scale formation are not covered. 	e proper chemical(s) and vstem to prevent scale Iembrane elements fouled

GENERAL HANDLING PROCEDURES

- Belements contained in the boxes must be kept dry at room temperature (7-32°C; 40 -95°F) and should not be stored in direct sunlight. If the polyethylene bag is damaged, a new preservative solution (sodium bisulfite) ⁸⁰ Only use chemicals compatible with the membrane must be added and air-tight seæld to prevent drying and biological growth.
- Permeate from the first hour of operation should be discarded to flush out the preservative solution.
- B Elements should be immersed in a preservative solution during storage, shipping and system shutdowns to prevent biological growth and freezing. The standard storage solution contains 1% by weight sodium bisulfite or sodium metabisulfite (food grade). For short term storage (i.e. one week or less) 1% by weight sodium metabisulfite solution is adequate for preventing biological growth.
- Keep elements moist at all times after initial wetting.
- Avoid excessive pressure and flow spikes.
- elements and components. Use of such chemicals may void the element limited warranty.
- Permeate pressure must always be equal or less than the feed/concentrate pressure. Damage caused by permeate back pressure voids the element limited warranty.
